The Budget High-Protein Meal & Movement Guide

A 7-day plan using affordable Kenyan staples —
plus simple home workouts, no gym required.

Curated by Nancy Wambui • [smartlukufitness site](https://smartlukufitness.site)

Welcome

This guide is built around one idea: eating well and moving your body shouldn't require an imported grocery list or a gym membership. Every meal here uses staples you can already find at your local market — ndengu, omena, eggs, sukuma wiki, ugali, and beans — and every workout needs nothing but floor space.

Use this guide as a starting template, not a strict rulebook. Swap meals around, repeat the days you like, and adjust portions to fit your own goals and appetite.

How this guide is organized

- Part 1 — A 7-day high-protein meal plan with approximate protein and cost per day.
- Part 2 — A single consolidated grocery list and weekly budget estimate.
- Part 3 — Three simple home workout routines (beginner, strength, and a desk-break stretch).
- Part 4 — Tips for staying consistent, and answers to common questions.

Part 1: The 7-Day Meal Plan

Each day includes breakfast, lunch, and dinner, plus a rough protein estimate and cost per person. Costs are approximate and will vary by market and season.

Day	Breakfast	Lunch	Dinner	~Protein	~Cost (KES)
1	Boiled eggs + fruit + yogurt	Omena, sukuma wiki, ugali	Bean stew, greens, rice	60g	180
2	Boiled eggs + black tea	Ndengu, sukuma wiki, ugali	Chicken, greens, ugali	65g	220
3	Plain yogurt + banana	Beans, cabbage, rice	Omena, sukuma wiki, ugali	58g	170
4	Eggs + avocado on toast	Ndengu, spinach, ugali	Bean stew, greens, ugali	62g	190
5	Yogurt + boiled eggs	Omena, kale, rice	Chicken stew, greens, ugali	68g	230
6	Eggs + fruit	Beans, sukuma wiki, ugali	Ndengu, cabbage, rice	60g	175
7	Yogurt + eggs + avocado	Omena, greens, ugali	Bean stew, spinach, rice	63g	195

Note: protein and cost figures are estimates for one adult portion and will shift with market prices and exact quantities used.

Part 2: Weekly Grocery List & Budget

Buying these in the quantities below should cover all seven days for one person. Prices are rough Nairobi market estimates — adjust for your own location.

Item	Quantity (week)	Est. Cost (KES)
Eggs	1 tray (30 pcs)	450
Ndengu (green grams)	1 kg	180
Beans	1 kg	160
Omena (dried)	0.5 kg	300
Sukuma wiki / kale / spinach	3-4 bunches	150
Cabbage	1 head	60
Maize flour (for ugali)	2 kg	140
Rice	1 kg	170
Plain yogurt	1 litre	220
Avocado	4-5 pcs (seasonal)	150
Chicken (optional, 2 meals)	1 kg	450
Cooking oil, onions, tomatoes, salt	as needed	300

Estimated weekly total: ~2,730 KES (roughly 390 KES/day for one person, less if you skip the optional chicken).

Part 3: Simple Home Workouts

No equipment needed for any of these. Do them on a mat, rug, or bare floor. Always warm up for 2-3 minutes first (marching in place, arm circles, gentle stretches).

Routine A — Beginner Full Body (20 min)

Exercise	Sets x Reps
Bodyweight squats	3 x 12
Wall or knee push-ups	3 x 10
Glute bridges	3 x 15
Standing marches (core)	3 x 20
Plank hold	3 x 20-30 sec

Routine B — No-Equipment Strength (25 min)

Exercise	Sets x Reps
Squats	4 x 15
Push-ups (full or modified)	4 x 10
Reverse lunges (each leg)	3 x 10
Superman back extensions	3 x 12
Bicycle crunches	3 x 20

Routine C — Desk-Break Stretch (10 min)

Exercise	Sets x Reps
Neck rolls	2 x 5 each way
Seated spinal twist	2 x 30 sec each side
Standing hamstring stretch	2 x 30 sec
Shoulder rolls + chest opener	2 x 10
Deep breathing	1 x 1 min

Part 4: Staying Consistent

- Prep proteins (boil eggs, soak beans) in one batch at the start of the week to save time.
- Keep portions realistic — a fist-sized serving of protein per meal is a good general target.
- Drink water throughout the day; it's easy to mistake thirst for hunger.
- Aim for consistency over perfection — repeating 80% of this plan beats abandoning it after one off day.

Frequently Asked Questions

Is ugali high in protein?

Not on its own — it's mostly carbohydrate. That's why every meal in this plan pairs it with a protein source like omena, beans, or chicken.

Can I follow this plan if I don't eat meat?

Yes. Ndengu, beans, eggs, and yogurt already cover most of the protein here. Omena is the only animal-based staple — swap it for extra beans or eggs if you'd rather skip it.

How quickly will I see results?

Most people notice energy and appetite changes within two to three weeks, with visible changes following after that if portions and consistency are maintained.
